About

Resolving technical-related problems in urgent condition is my expertise, as I am spontaneous, logical and rational. I tend to be action-oriented and are able to face sudden changes quickly and quietly. When on the team, I have the ability to analyze, manage and delegate work. I get the source of energy from ideas, emotions and memory. I am pleased with the facts and concrete data in front of the eyes, and tend to use causal logic in decision making.

Still hoping to work or study in Japan.
